TRAINING

Cadmidium's Training Service provides customers with; training needs analysis, training design, delivery and evaluation services for all training requirements. We use proven approaches to training methodology ensuring cost-effective training is identified, designed and delivered to meet the customer needs.

We offer a range of Service Features which include; Training Material and Media, Course designs to meet your objectives, Bespoke targeted training material provided for ongoing use, Full analysis of training Outcomes and Evaluation Reports, and many more Service Features and benefits that can be issued upon request. Our courses can be delivered at customer premises or at Cadmium premises or remotely via our Cloud Based Training and research system.

As training specialists we offer a range of training including:

- M-Link (NATO JChat) – Introduction
- M-Link (NATO JChat) - Advanced
- Radio Communication principles
- Tactical Radio Systems integration, deployment and use

M-Link Administrator Training course is registered on the NATO training Catalogue under Course A9005—

[20210112_nci_academy_2021_course_catalogue_v5_1.pdf\(nato.int\)](#)

Cadmidium also provide a bespoke course design service following the principles of the NATO BI-SC-75-7 training directive and the UK MoD JSP822 Defence Systems Approach to Training (DSAT)

Using our purpose built training facility we are able to provide a hands on training experience whereby students are able to explore the concepts and techniques required when working in highly technical and specialised environments. Our students gain a “real” understanding of technology within a real life context.

Using our deployable training facility we are able to bring the training experience to our customers. Using small form servers and software virtualisation we are able to offer deployed standalone training or deployed integrated training aimed at enhancing the student experience.

Using our Cloud Based remote training system students can attend training from any location including at home as long as access to the internet is available.

Our instructors are specialists with decades of hands on experience of the technologies and subjects being taught.

We believe that learning should be fun and therefore create enjoyable learning experiences through scenario based training including virtual exercises.
